## *wetroom tanking kits*

Transform your bathroom into a stylish wetroom without the need of a shower enclosure. Even a small bathroom becomes a luxurious, spacious wetroom. With our well engineered AQUAFLOOR kit you can install a true wetroom safely...

For many years wetrooms especially 1st floor timber situations have been a worry with illconceived makeshift systems that inevitably caused problems. Using the best technologically advanced materials **livinghouse** have produced a true tanking system - the AQUAFLOOR kit that does not rely on the tiles or floor covering for a leak proof bathroom. The system is also ideal for use with concrete subfloors.

## floor constructions....

Full fitting instructions are supplied with every tanking kit, and can also be downloaded from [www.wetrooms.livinghouse.co.uk](http://www.wetrooms.livinghouse.co.uk).

### concrete subfloors

AQUAFLOOR is ideal for tanking concrete subfloors.

1. The concrete is removed to the size and depth of the AQUAFLOOR hidden tray.
2. Pipe work and drainage is then installed.
3. Once plumbing is complete the hidden tray is bedded down to sit flush with the 6mm waterproof tanking board.
4. 6mm waterproof tanking boards are secured to the sound surrounding concrete subfloor using a good quality flexible tile adhesive.
5. Once the adhesive has set all joints between the tanking boards, hidden tray and walls are then primed ready for the sealing membrane.
6. Sealing membrane is then applied to all joints.
7. Now you wetroom floor is completely tanked ready for tiling.

### timber subfloors

AQUAFLOOR is ideal for first and groundfloor timber joist situations.

1. Timber subfloor is removed to the size of the AQUAFLOOR hidden tray.
2. Pipe work and drainage is then installed.
3. Once plumbing is complete, the hidden tray is fitted with a sufficient support for the tray between / on top of joists ensuring the tray finishes flush to the surrounding tanking boards.
4. Next the 6mm waterproof tanking boards are secured to the sound surrounding timber subfloor using a good quality flexible tile adhesive.
5. Once adhesive has set all joints between tanking board hidden tray & walls are then primed ready for the sealing membrane.
6. The self adhesive sealing membrane is then applied to all joints
7. Now the wetroom floor is completely tanked ready for tiling.

### underfloor heating

Many times weve been asked if underfloor heating can be used with our kits. . the answer is yes. We can even supply an electrical version guaranteed by the manufacturer for the situation.

### dry deck situations

In situations where there is no gravity fall for the waste drainage a pump system can be fitted.

### guarantee

For peace of mind AQUAFLOOR comes with a 15 years product warranty which ensures the durability and quality of the product assuming it has been professionally installed to the manufactures instructions.

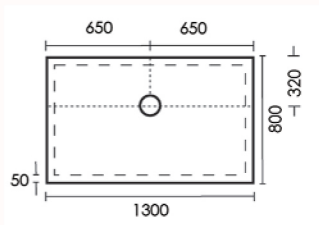

# hidden tray sizes

## AF1
